

bigtincan hub™ for Windows

Corporate Content

The explosion of the use of mobile devices in the field, together with the massive and continuing requirement to make sense of corporate content is one of the biggest challenges and opportunities of the modern workplace. Original content is being created at a staggering rate. Content comes from the Internet, corporate file shares, document management systems, records management systems, personal file sharing platforms, personal computers and any number of other sources. Making sense of that content on a mobile device is becoming a defining the way of delivering enterprise productivity.

bigtincan hub

bigtincan hub is a system for delivering secure content, documents and information to large numbers of users on smart mobile devices, computers, and HTML5 capable web browsers. The solution links with advanced server side controls to send messages and content to devices based on individuals, groups, locations or various combinations of policy based rights management. bigtincan hub also provides a structure for delivering live content feeds (RSS and Social feeds) to smart mobile devices.

With bigtincan hub users have the ability to interact with, edit, view, annotate and create directly within the platform. With highly secure offline access and integration with other mainline enterprise business systems, bigtincan hub is a core component of the most important business processes.

With built in Content Intelligence, bigtincan hub guarantees that people leverage the highest value content at the right time and in the correct context, unlocking the value of the social enterprise.

bigtincan hub for Windows extends mobile productivity to devices running Microsoft™ Windows 8™ including tablet devices and traditional computers. Now your full work force can participate in the enterprise mobility productivity revolution no matter if they are in the field or desk-bound.

Secure, Intelligent and Social

These are three defining characteristics of the engaged enterprise. bigtincan hub for Windows uncovers the hidden value in content the workplace produces every day.

bigtincan hub ContentIQ guarantees that people leverage the highest value content at the right time and in the correct context, unlocking the value of the social enterprise.

bigtincan hub with SocialIQ and ExpertIQ ensures seamless collaboration with the most relevant content, and the correct expert – whenever and wherever you are.

Intelligent	Secure	Social
Powerful document management functionality that empowers tablet users to directly edit, mark-up and organize nearly any form of content including Word documents, Excel spreadsheets, PowerPoint presentations, PDFs, videos, podcasts and more.	Security compliance with key regulatory initiatives including SOX, PCI, HIPAA, FISMA and more.	Live, document-level video collaboration – letting users see and hear colleagues during direct feedback and editing sessions.
Real-time sync capabilities that ensures that mobile workers have the most up-to-date, relevant content at their finger tips regardless of location.	Content policy management, including role-based permissions that safeguard sensitive information by ensuring that content is only viewable and/or editable by the intended recipient.	Content rating, subscribing and sharing – helping users identify and prioritize interesting content and engage with peers in real-time.
Integration to a wide range of external third party systems from Sharepoint and Outlook to SAP and Salesforce.com	Content 'push' capabilities that puts important policy and corporate information front-and-center for remote workers.	Published social feeds and group-based feed syndication that ensures that remote workers have the most relevant and interesting content regardless of location and connection status.
ContentIQ - An innovative content scoring system that highlights and prioritizes content – saving workers in the field significant time while ensuring that the most relevant content is read first.	Works with device side security containers from providers like Good, Mocana, Citrix and more...	Server based content sharing – leveraging the server to send content as a link with full support for closed loop marketing and reporting.
Instant network awareness that intelligently identifies the best possible network connection for road warriors and seamlessly transitions between WiFi and cellular networks.	Provides complete remote content wipe for the BYOD user.	Realtime content metrics (SocialIQ) – now you can know for the first time who is doing what in the field with what materials.
	Force password changes remotely and link to upstream policy managers including AD and LDAP directories.	Share content views and clone top users for instantly enabling socialIQ
	Second factor, Password protected documents, content and media.	
	Location based content control – stop users taking content to places that they shouldn't.
