

bigtincan hub for Box

bigtincan hub brings mobile productivity, social intelligence and any time, any where access to the files your company has stored on Box. Use Box as a single file repository and gain uninterrupted enterprise collaboration, office editing, social engagement and intelligence... with one simple integration.

By leveraging the integration between Box and bigtincan hub, your organization can measurably improve productivity, add rich media, leverage social intelligence and unlock the potential of enterprise mobility.

The combined solutions allow organizations to expand the reach of its content, add location based controls, rich media interaction for file formats like PowerPoint, Microsoft Visio Microsoft Project and many more... all while increasing overall security and auditability.

With Box's world-class collaboration capabilities and bigtincan hub's mobile productivity platform, customers can finally realize the promise of mobile computing!

Use Case 1 — Improve Mobile Productivity

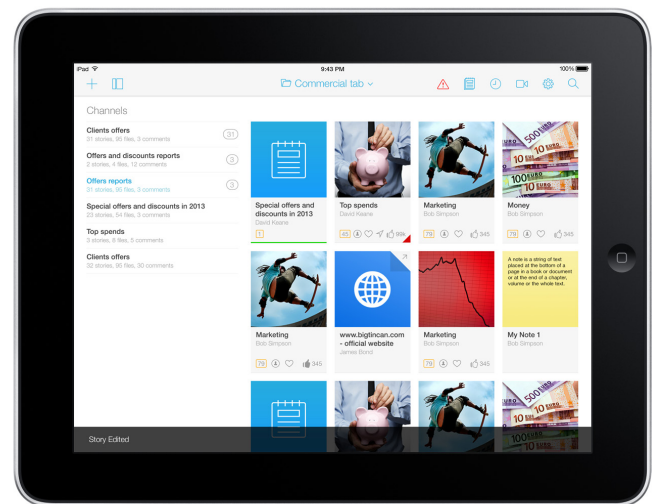

As part of the Box One cloud ecosystem bigtincan can provide a single app experience for end users, and eliminate the need to license, train, manage, deploy, multiple third party apps to help users be productive with their content, for example:

- Create, view, edit, annotate and share MS Office documents
- Fillable eForms and intelligent workflow
- Annotate PDF and MS PowerPoint
- Share annotations in real time with other users without leaving the app (server-based)
- Secure multi-media note taking
- Render complex animated MS PowerPoint presentations
- Broadcast presentations from mobile device
- Video chat on a document via tablet
- View CAD, MS Visio, MS Project, Adobe InDesign files

Free Trial

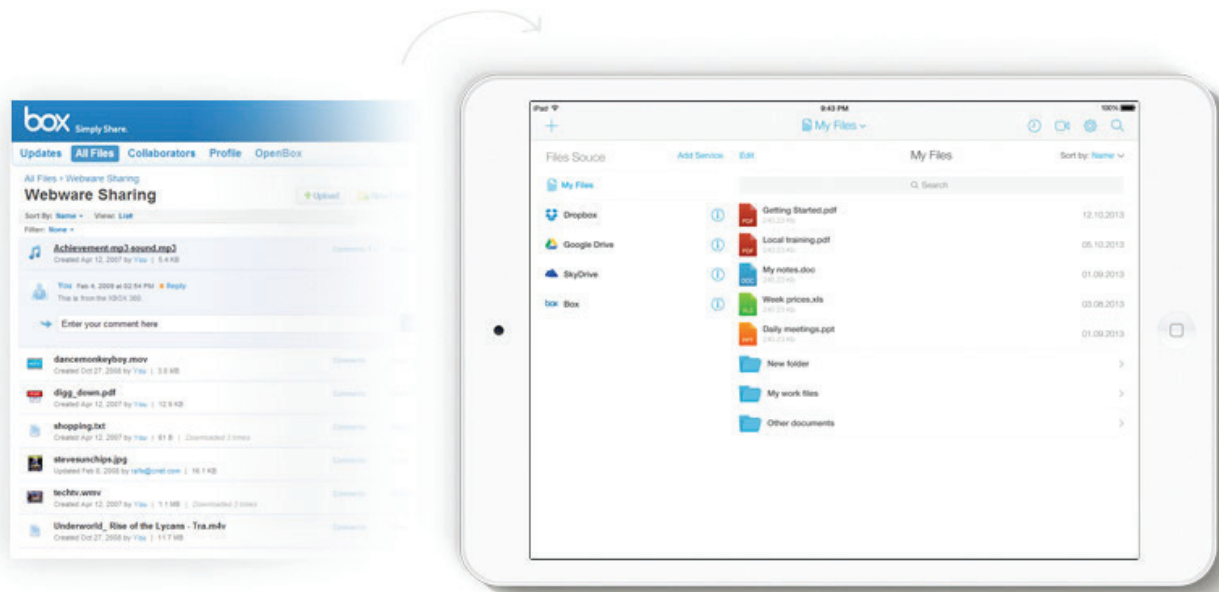

Get a free 30-day trial of bigtincan hub and see how together your organization can make more of your mobile devices.

Use Case 2 – Build Mobility Apps on Top Box

bigtincan leverages the Box open API to enable organizations to quickly and easily build a robust mobile content productivity solution. With bigtincan, organizations are able to create a custom branded app experience on the fly (requiring no development resources) and role-based relevant views into content. Because your content resides in Box, content will dynamically be updated on a user's mobile device and is available both on and offline, ensuring the right users get the right content at the right time and location – securely – regardless of their network connectivity.
